

### Intent statement

In science, pupils follow the AQA entry level GCSE curriculum which includes exploring, discussing, testing and developing scientific principles and the relationships between living things, familiar environments and the real world.

STEM activities are used to gain an appreciation of materials, tools and processes and give students an understanding of how science is linked to other subjects.

### Implementation

In Science, formative and summative assessment strategies are used which include regular assessment tasks, quizzes and informal strategies with verbal and written outcomes, reflection tasks and presentations.
